About the book

I am a french writer from Liberlog at editions.liberlog.fr and www.archive.org.

I recommend electronic ink readers not linked to a website selling books. Even if they are more expensive, they will allow you to read all the authors present in my books. Good readings !

Preface

You have chosen to focus on the economy. Be aware that this discipline includes other subjects. In other words, this subject influences the scientific strategies of other subjects, badly or greatly. In a bad way with the monetary economy, whose only purpose is to make believe in the God money, in a good way, with the real economy, also called physical economy. Moral permits to cancel bad things. Physical economy makes it possible to tell gospels.

Physical economy consists to understand the notion of infinity, which is in life or in the circle. This real economy indicates that human society grows, that we can green deserts with Thorium and controlled thermonuclear fusion, to recycle every wastes.

With the real economy we can go to space with nuclear fusion, ecological, to leave, when necessary, our source, the Earth.

Nuclear power is that is inside an atom, that was believed to be unbreakable. Nuclear energy should be learned in school, just like music, philosophizing, understanding our limits, learning to learn, economics, quantum physics, which helps to understand nuclear, Einstein's childhood and his theory of relativity, also Jean-Pierre Petit's Janus theory. These Theories allow us to understand the universe.

If you seek the truth, helped with this book, that will help you, if you are sufficiently rebellious to become a genius, seeking your limits, leading you through the economy. Start now to write a poem, whose is half-sentences coupled ending with the same syllable, with metaphors which are comparisons without comparators, to go to a truth, then your truth, finally to the scientific truth.

Understanding the human

What Does Value Mean?

Wednesday, December 11, 2013

Our parents often tell us "Find a job to make your life !". We can see on 2013 that it is more and more difficult to find a job. Adam Smith, the actual economy's guru, explains that work is value. Yet when something is rare, it has more value, without even working to make that.

When Robinson Crusoe arrived into an desert island, he was sinful. He lived like an animal with the first fruits he found. While he could only feed with fruits, they had got a high value.

With fire, he could survive and eat better. The food lasted longer. Then he created a bow and arrows, with a tent that could be easily destroyed by wild animals, when the fire stopped. This tent was very

valuable. It allowed him, with the fire, to sleep.

The axe makes it possible to create fields

Alone, you have to spend a lot of time hunting. Animals has therefore gained more value than the fruits in his eyes. He was able to create, with research and theory, a hook. This allowed him to create a fishing rod. The animals was then put into competition with the fishes. Fishes

required less work, but gained value because he had to catch them. When we do not have to catch fishes, they have got lesser value.

Then he meets a native. While one allows the twice survival, the other creates an ax, then a house, then a net. The tent becomes useless and the house can be easily built with twice. Linking their power makes the buddies happy. Indeed the net can reduce the value of shells and fishes, because there are a lot.

Robinson can then learn writing to his friend. Their minds are not just looking for resources. The friend and Robinson raise their spirit. The profusion allows them to grow their creative reason. The energy allows to reduce working. The spirit and the creativity make them making and acting with more and more

perfection.

The value is therefore resistance to obtaining a commodity, then a tool for autonomy. Associating individuals allows, with tools, to bring a lot of things. Last but not least, they work lesser with energy. Indeed a machine tool can bring even more things, and therefore less and less value to goods and commodities.

An industry makes better with dense energy, to replace the little energy we can provide into. An industry can produce thousands of goods of the same caliber with one machine. These products are perfect for simple and almost immediate use. It reduces the value's perception.

Making Iron

With liberalism, just a country with industries got before the others will tend to optimize its industries. It will protect them by exporting its manufactured products, in order to obtain the best raw materials, to increase the quality of its industries. China protects its industries in 2013. That's what France did during the 30 glorious years and with Colbert. China has protected its industries and can therefore benefit from the best raw materials. For China, the spirit is very valuable.

My Notes

What do you wish to have? Is it important?

What is a Resource?

July 2018

A resource can provide that you need. A resource is something that we will search, then we will transform it to create goods or energy. A reused waste can also be a resource. So everything can become a resource, especially unused material. A resource is something that humans transform, so a resource is not natural, but usable by humans.

Lyndon Larouche describes how humans can determine what sort of resources will enable humans to improve their standard of living. Identifying unused technologies, then defining the resources to use for, helps to define a relative population density potential. Thus we will use labor saving, allowed while linking with industries, to define a growth's plan.

We will use energy's resources to supply the industries that will be protected from outside countries, allowed by a public

productive money. Indeed, if the currency is linked to the production, if it belongs to a state, the nation-state using this money will support the industries. If the currency is private everywhere in the country, however, then it will be about creating money for the one who owns the currency, not to grow country.

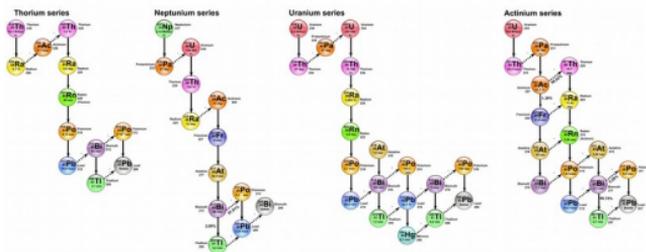

Humans do not work to value money, but to participate to society, enriching themselves. Thus saving work realized by industries will allow us to grow more and more in the universe, which the Earth is a part of.

Book : So you want to know everything about the economy ? - Lyndon Larouche - The potential for relative population density

My Notes

Knowing that certain countries have thorium deposits, that it rains on the poles and at the equator, establish a plan to green the deserts.

We transform atoms

What is Wealth?

Wednesday, January 4, 2017

Manyones would like to own Robinson Crusoe's knowledge. Indeed, he knows how to do a lot of things. Wealth is knowing how to use that you have. If you have something and you are useless, you are not rich. Rather, you are bogged down in our property.

So Jean-Charles Coovi-Gomèz explains that to be rich is to benefit from his knowledge and to grow. Also being poor is to be in luxury and regression, so to the short term.

So someone who has too much will have to make living that he has. He may then acquire people using that he has got. He will then want to own these people, to own his property. He will create slavery.

So poors can claim a redistribution

according to the Jubilee economy, promoted by christians. There is also the antitrust law decided by United-States.

If we have something, that we can both repair and use, this object has a lot of value for us. We feel really rich then. Thus, we will want to own many of these objects to show our wealth. We create collections.

Manual work is very rich

My Notes

Thank You for previewing this eBook

You can read the full version of this eBook in different formats:

- HTML (Free /Available to everyone)
- PDF / TXT (Available to V.I.P. members. Free Standard members can access up to 5 PDF/TXT eBooks per month each month)
- Epub & Mobipocket (Exclusive to V.I.P. members)
