I

When one has lived for quite a long time in a particular civilization and has often tried to discover what its origins were and along what path it has developed, one sometimes also feels tempted to take a glance in the other direction and to ask what further fate lies before it and what transformations it is destined to undergo. But one soon finds that the value of such an enquiry is diminished from the outset by several factors. Above all, because there are only a few people who can survey human activity in its full compass. Most people have been obliged to restrict themselves to a single, or a few, fields of it. But the less a man knows about the past and the present the more insecure must prove to be his judgement of the future. And there is the further difficulty that precisely in a judgement of this kind the subjective expectations of the individual play a part which it is difficult to assess; and these turn out to be dependent on purely personal factors in his own experience, on the greater or lesser optimism of his attitude to life, as it has been dictated for him by his temperament or by his success or failure. Finally, the curious fact makes itself felt that in general people experience their present naïvely, as it were, without being able to form an estimate of its contents; they have first to put themselves at a distance from it—the present, that is to say, must have become the past—before it can yield points of vantage from which to judge the future.

Thus anyone who gives way to the temptation to deliver an opinion on the probable future of our civilization will do well to remind himself of the difficulties I have just pointed out, as well as of the uncertainty that attaches quite generally to any prophecy. It follows from this, so far as I am concerned, that I shall make a hasty retreat before a task that is too great, and shall promptly seek out the small tract of territory which has claimed my attention hitherto, as soon as I have determined its position in the general scheme of things.

Human civilization, by which I mean all those respects in

which human life has raised itself above its animal status and differs from the life of beasts—and I scorn to distinguish between culture and civilization—, presents, as we know, two aspects to the observer. It includes on the one hand all the knowledge and capacity that men have acquired in order to control the forces of nature and extract its wealth for the satisfaction of human needs, and, on the other hand, all the regulations necessary in order to adjust the relations of men to one
another and especially the distribution of the available wealth. The two trends of civilization are not independent of each other: firstly, because the mutual relations of men are profoundly influenced by the amount of instinctual satisfaction which the existing wealth makes possible; secondly, because an individual man can himself come to function as wealth in relation to another one, in so far as the other person makes use of his capacity for work, or chooses him as a sexual object; and thirdly, moreover, because every individual is virtually an enemy of civilization, though civilization is supposed to be an object of universal human interest. It is remarkable that, little as men are able to exist in isolation, they should nevertheless feel as a heavy burden the sacrifices which civilization expects of them in order to make a communal life possible. Thus civilization has to be defended against the individual, and its regulations, institutions and commands are directed to that task. They aim not only at effecting a certain distribution of wealth but at maintaining that distribution; indeed, they have to protect everything that contributes to the conquest of nature and the production of wealth against men's hostile impulses. Human creations are easily destroyed, and science and technology, which have built them up, can also be used for their annihilation.

One thus gets an impression that civilization is something which was imposed on a resisting majority by a minority which understood how to obtain possession of the means to power and coercion. It is, of course, natural to assume that these difficulties are not inherent in the nature of civilization itself but are determined by the imperfections of the cultural forms which have so far been developed. And in fact it is not difficult to indicate those defects. While mankind has made continual advances in its control over nature and may expect to make still greater ones, it is not possible to establish with certainty that a similar advance has been made in the management of human affairs; and probably at all periods, just as now once again, many people have asked themselves whether what little civilization has thus acquired is indeed worth defending at all. One would think that a re-ordering of human relations should be possible, which would remove the sources of dissatisfaction with civilization by renouncing coercion and the suppression of the instincts, so that, undisturbed by internal discord, men might devote themselves to the acquisition of wealth and its enjoyment. That would be the golden age, but it is questionable if such a state of affairs can be realized. It seems rather that every civilization must be built up on coercion and renunciation of instinct; it does not even seem certain that if coercion were to cease the majority of human beings would be prepared to undertake to perform the work necessary for acquiring new wealth. One has, I think, to reckon with the fact that there are present in all men destructive, and therefore anti-social and anti-cultural, trends and that in a great number of people these are strong enough to determine their behaviour in human society.

1 [The hostility of human individuate to civilization plays a large part in the earlier chapters of this work. Freud returned to the subject and discussed it still more fully two years later in his Civilization and its Discontents (1930a).]
This psychological fact has a decisive importance for our judgement of human civilization. Whereas we might at first think that its essence lies in controlling nature for the purpose of acquiring wealth and that the dangers which threaten it could be eliminated through a suitable distribution of that wealth among men, it now seems that the emphasis has moved over from the material to the mental. The decisive question is whether and to what extent it is possible to lessen the burden of the instinctual sacrifices imposed on men, to reconcile men to those which must necessarily remain and to provide a compensation for them. It is just as impossible to do without control of the mass by a minority as it is to dispense with coercion in the work of civilization. For masses are lazy and unintelligent; they have no love for instinctual renunciation, and they are not to be convinced by argument of its inevitability; and the individuals composing them support one another in giving free rein to their indiscipline. It is only through the influence of individuals who can set an example and whom masses recognize as their leaders that they can be induced to perform the work and undergo the renunciations on which the existence of civilization depends. All is well if these leaders are persons who possess superior insight into the necessities of life and who have risen to the height of mastering their own instinctual wishes. But there is a danger that in order not to lose their influence they may give way to the mass more than it gives way to them, and it therefore seems necessary that they shall be independent of the mass by having means to power at their disposal. To put it briefly, there are two widespread human characteristics which are responsible for the fact that the regulations of civilization can only be maintained by a certain degree of coercion— namely, that men are not spontaneously fond of work and that arguments are of no avail against their passions.

I know the objections which will be raised against these assertions. It will be said that the characteristic of human masses depicted here, which is supposed to prove that coercion cannot be dispensed with in the work of civilization, is itself only the result of defects in the cultural regulations, owing to which men have become embittered, revengeful and inaccessible. New generations, who have been brought up in kindness and taught to have a high opinion of reason, and who have experienced the benefits of civilization at an early age, will have a different attitude to it. They will feel it as a possession of their very own and will be ready for its sake to make the sacrifices as regards work and instinctual satisfaction that are necessary for its preservation. They will be able to do without coercion and will differ little from their leaders. If no culture has so far produced human masses of such a quality, it is because no culture has yet devised regulations which will influence men in this way, and in particular from childhood onwards.
It may be doubted whether it is possible at all, or at any rate as yet, at the present stage of our control over nature, to set up cultural regulations of this kind. It may be asked where the number of superior, unswerving and disinterested leaders are to come from who are to act as educators of the future generations, and it may be alarming to think of the enormous amount of coercion that will inevitably be required before these intentions can be carried out. The grandeur of the plan and its importance

for the future of human civilization cannot be disputed. It is securely based on the psychological discovery that man is equipped with the most varied instinctual dispositions, whose ultimate course is determined by the experiences of early childhood. But for the same reason the limitations of man's capacity for education set bounds to the effectiveness of such a transformation in his culture. One may question whether, and in what degree, it would be possible for a different cultural environment to do away with the two characteristics of human masses which make the guidance of human affairs so difficult, me experiment has not yet been made. Probably a certain percentage of mankind (owing to a pathological disposition or an excess of instinctual strength) will always remain asocial; but if it were feasible merely to reduce the majority that is hostile towards civilization to-day into a minority, a great deal would have been accomplished—perhaps all that can be accomplished.

I should not like to give the impression that I have strayed a long way from the line laid down for my enquiry [p. 5]. Let me therefore give an express assurance that I have not the least intention of making judgements on the great experiment in civilization that is now in progress in the vast country that stretches between Europe and Asia. I have neither the special knowledge nor the capacity to decide on its practicability, to test the expediency of the methods employed or to measure the width of the inevitable gap between intention and execution. What is in preparation there is unfinished and therefore eludes an investigation for which our own long-consolidated civilization affords us material.

1 [See, however, some remarks in Chapter V of Civilization and its Discontents (1930a), p. 112 ff. below, and at two points in Why War? (1933b) and a long discussion in the last of the New Introductory Lectures (1933a).]

II

We have slipped unawares out of the economic field into the field of psychology. At first we were tempted to look for the assets of civilization in the available wealth and in the regulations for its distribution. But with the recognition that every civilization rests on a compulsion to work and a renunciation of instinct and therefore inevitably provokes opposition from those affected by these demands, it has become clear that civilization cannot consist principally or solely in wealth itself and the means of acquiring it and the arrangements for its distribution; for these
things are threatened by the rebelliousness and destructive mania of the participants in
civilization. Alongside of wealth we now come upon the means by which civilization can be
defended—measures of coercion and other measures that are intended to reconcile men to it and
to recompense them for their sacrifices. These latter may be described as the mental assets of
civilization.

For the sake of a uniform terminology we will describe the fact that an instinct cannot be
satisfied as a ‘frustration’, the regulation by which this frustration is established as a
‘prohibition’ and the condition which is produced by the prohibition as a ‘privation’. The first
step is to distinguish between privations which affect everyone and privations which do not
affect everyone but only groups, classes or even single individuals. The former are the earliest;
with the prohibitions that established them, civilization—who knows how many thousands of
years ago?—began to detach man from his primordial animal condition. We have found to our
surprise that these privations are still operative and still form the kernel of hostility to
civilization. The instinctual wishes that suffer under them are born afresh with every child; there
is a class of people, the neurotics, who already react to these frustrations with asocial behaviour.
Among these instinctual wishes are those of incest, cannibalism and lust for killing. It sounds
strange to place alongside one another wishes which everyone seems united in repudiating and
others about which there is so much lively dispute in our civilization as to whether they shall be
permitted or frustrated; but psychologically it is justifiable to do so. Nor is the attitude

of civilization to these oldest instinctual wishes by any means uniform. Cannibalism alone seems
to be universally proscribed and—to the non-psycho-analytic view—to have been completely
surmounted. The strength of the incestuous wishes can still be detected behind the prohibition
against them; and under certain conditions killing is still practised, and indeed commanded, by
our civilization. It is possible that cultural developments lie ahead of us in which the satisfaction
of yet other wishes, which are entirely permissible to-day, will appear just as unacceptable as
cannibalism does now.

These earliest instinctual renunciations already involve a psychological factor which remains
important for all further instinctual renunciations as well. It is not true that the human mind has
undergone no development since the earliest times and that, in contrast to the advances of
science and technology, it is the same to-day as it was at the beginning of history. We can point
out one of these mental advances at once. It is in keeping with the course of human development
that external coercion gradually becomes internalized; for a special mental agency, man's super-
ego, takes it over and includes it among its commandments. Every child presents this process of
transformation to us; only by that means does it become a moral and social being. Such a
strengthening of the super-ego is a most precious cultural asset in the psychological field. Those
in whom it has taken place are turned from being opponents of civilization into being its
vehicles. The greater their number is in a cultural unit the more secure is its culture and the more
it can dispense with external measures of coercion. Now the degree of this internalization differs
greatly between the various instinctual prohibitions. As regards the earliest cultural demands,
which I have mentioned, the internalization seems to have been very extensively achieved, if we
leave out of account the unwelcome exception of the neurotics. But the case is altered when we
turn to the other instinctual claims. Here we observe with surprise and concern that a majority of people obey the cultural prohibitions on these points only under the pressure of external coercion—that is, only where that coercion can make itself effective and so long as it is to be feared. This is also true of what are known as the moral demands of civilization, which

1 [See Chapter III of The Ego and the Id (1923b), Standard Ed., 19, 28ff.]

likewise apply to everyone. Most of one's experiences of man's moral untrustworthiness fall into this category. There are countless civilized people who would shrink from murder or incest but who do not deny themselves the satisfaction of their avarice, their aggressive urges or their sexual lusts, and who do not hesitate to injure other people by lies, fraud and calumny, so long as they can remain unpunished for it; and this, no doubt, has always been so through many ages of civilization.

If we turn to those restrictions that apply only to certain classes of society, we meet with a state of things which is flagrant and which has always been recognized. It is to be expected that these underprivileged classes will envy the favoured ones their privileges and will do all they can to free themselves from then-own surplus of privation. Where this is not possible, a permanent measure of discontent will persist within the culture concerned and this can lead to dangerous revolts. If, however, a culture has not got beyond a point at which the satisfaction of one portion of its participants depends upon the suppression of another, and perhaps larger, portion—and this is the case in all present-day cultures—it is understandable that the suppressed people should develop an intense hostility towards a culture whose existence they make possible by their work, but in whose wealth they have too small a share. In such conditions an internalization of the cultural prohibitions among the suppressed people is not to be expected. On the contrary, they are not prepared to acknowledge the prohibitions, they are intent on destroying the culture itself, and possibly even on doing away with the postulates on which it is based. The hostility of these classes to civilization is so obvious that it has caused the more latent hostility of the social strata that are better provided for to be overlooked. It goes without saying that a civilization which leaves so large a number of its participants unsatisfied and drives them into revolt neither has nor deserves the prospect of a lasting existence.

The extent to which a civilization's precepts have been internalized—to express it popularly and unpsychologically: the moral level of its participants—is not the only form of mental wealth that comes into consideration in estimating a civilization's value. There are in addition its assets in the shape of ideals and artistic creations—that is, the satisfactions that can be derived from those sources.

People will be only too readily inclined to include among the psychical assets of a culture its ideals—its estimates of what achievements are the highest and the most to be striven after. It will
sem at first as though these ideals would determine the achievements of the cultural unit; but the actual course of events would appear to be that the ideals are based on the first achievements which have been made possible by a combination of the culture's internal gifts and external circumstances, and that these first achievements are then held on to by the ideal as something to be carried further. The satisfaction which the ideal offers to the participants in the culture is thus of a narcissistic nature; it rests on their pride in what has already been successfully achieved. To make this satisfaction complete calls for a comparison with other cultures which have aimed at different achievements and have developed different ideals. On the strength of these differences every culture claims the right to look down on the rest. In this way cultural ideals become a source of discord and enmity between different cultural units, as can be seen most clearly in the case of nations.

The narcissistic satisfaction provided by the cultural ideal is also among the forces which are successful in combating the hostility to culture within the cultural unit. This satisfaction can be shared in not only by the favoured classes, which enjoy the benefits of the culture, but also by the suppressed ones, since the right to despise the people outside it compensates them for the wrongs they suffer within their own unit. No doubt one is a wretched plebeian, harassed by debts and military service; but, to make up for it, one is a Roman citizen, one has one's share in the task of ruling other nations and dictating their laws. This identification of the suppressed classes with the class who rules and exploits them is, however, only part of a larger whole. For, on the other hand, the suppressed classes can be emotionally attached to their masters; in spite of their hostility to them they may see in them their ideals; unless such relations of a fundamentally satisfying kind subsisted, it would be impossible to understand how a number of civilizations have survived so long in spite of the justifiable hostility of large human masses.

A different kind of satisfaction is afforded by art to the participants in a cultural unit, though as a rule it remains inaccessible to the masses, who are engaged in exhausting work and have not enjoyed any personal education. As we discovered

- 13 -

long since, art offers substitutive satisfactions for the oldest and still most deeply felt cultural renunciations, and for that reason it serves as nothing else does to reconcile a man to the sacrifices he has made on behalf of civilization. On the other hand, the creations of art heighten his feelings of identification, of which every cultural unit stands in so much need, by providing an occasion for sharing highly valued emotional experiences. And when those creations picture the achievements of his particular culture and bring to his mind its ideals in an impressive manner, they also minister to his narcissistic satisfaction.

No mention has yet been made of what is perhaps the most important item in the psychical inventory of a civilization. This consists in its religious ideas in the widest sense—in other words (which will be justified later) in its illusions.

1 [Gf., for instance, ‘Creative Writers and Day-Dreaming’ (1908e).]
III

In what does the peculiar value of religious ideas lie?

We have spoken of the hostility to civilization which is produced by the pressure that civilization exercises, the renunciations of instinct which it demands. If one imagines its prohibitions lifted—if, then, one may take any woman one pleases as a sexual object, if one may without hesitation kill one's rival for her love or anyone else who stands in one's way, if, too, one can carry off any of the other man's belongings without asking leave—how splendid, what a string of satisfactions one's life would be! True, one soon comes across the first difficulty: everyone else has exactly the same wishes as I have and will treat me with no more consideration than I treat him. And so in reality only one person could be made unrestrictedly happy by such a removal of the restrictions of civilization, and he would be a tyrant, a dictator, who had seized all the means to power. And even he would have every reason to wish that the others would observe at least one cultural commandment: ‘thou shalt not kill’.

But how ungrateful, how short-sighted after all, to strive for the abolition of civilization! What would then remain would be a state of nature, and that would be far harder to bear. It is true that nature would not demand any restrictions of instinct from us, she would let us do as we liked; but she has her own particularly effective method of restricting us. She destroys us—coldly, cruelly, relentlessly, as it seems to us, and possibly through the very things that occasioned our satisfaction. It was precisely because of these dangers with which nature threatens us that we came together and created civilization, which is also, among other things, intended to make our communal life possible. For the principal task of civilization, its actual raison d'être, is to defend us against nature.

We all know that in many ways civilization does this fairly well already, and clearly as time goes on it will do it much better. But no one is under the illusion that nature has already been vanquished; and few dare hope that she will ever be entirely subjected to man. There are the elements, which seem to mock at all human control: the earth, which quakes and is torn apart and buries all human life and its works; water, which deluges and drowns everything in a turmoil; storms, which blow everything before them; there are diseases, which we have only recently recognized as attacks by other organisms; and finally there is the painful riddle of death, against which no medicine has yet been found, nor probably will be. With these forces nature rises up against us, majestic, cruel and inexorable; she brings to our mind once more our weakness and helplessness, which we thought to escape through the work of civilization. One of the few gratifying and exalting impressions which mankind can offer is when, in the face of an elemental catastrophe, it forgets the discordancies of its civilization and all its internal difficulties and animosities, and recalls the great common task of preserving itself against the superior power of nature.
For the individual, too, life is hard to bear, just as it is for mankind in general. The civilization in which he participates imposes some amount of privation on him, and other men bring him a measure of suffering, either in spite of the precepts of his civilization or because of its imperfections. To this are added the injuries which untamed nature—he calls it Fate—inflicts on him. One might suppose that this condition of things would result in a permanent state of anxious expectation in him and a severe injury to his natural narcissism. We know already how the individual reacts to the injuries which civilization and other men inflict on him: he develops a corresponding degree of resistance to the regulations of civilization and of hostility to it. But how does he defend himself against the superior powers of nature, of Fate, which threaten him as they threaten all the rest?

Civilization relieves him of this task; it performs it in the same way for all alike; and it is noteworthy that in this almost all civilizations act alike. Civilization does not call a halt in the task of defending man against nature, it merely pursues it by other means. The task is a manifold one. Man's self-regard, seriously menaced, calls for consolation; life and the universe must be robbed of their terrors; moreover his curiosity, moved, it is true, by the strongest practical interest, demands an answer.

A great deal is already gained with the first step: the humanization of nature. Impersonal forces and destinies cannot be approached; they remain eternally remote. But if the elements have passions that rage as they do in our own souls, if death itself is not something spontaneous but the violent act of an evil Will, if everywhere in nature there are Beings around us of a kind that we know in our own society, then we can breathe freely, can feel at home in the uncanny and can deal by psychical means with our senseless anxiety. We are still defenceless, perhaps, but we are no longer helplessly paralysed; we can at least react. Perhaps, indeed, we are not even defenceless. We can apply the same methods against these violent supermen outside that we employ in our own society; we can try to adjure them, to appease them, to bribe them, and, by so influencing them, we may rob them of a part of their power. A replacement like this of natural science by psychology not only provides immediate relief, but also points the way to a further mastering of the situation.

For this situation is nothing new. It has an infantile prototype, of which it is in fact only the continuation. For once before one has found oneself in a similar state of helplessness: as a small child, in relation to one's parents. One had reason to fear them, and especially one's father; and yet one was sure of his protection against the dangers one knew. Thus it was natural to assimilate the two situations. Here, too, wishing played its part, as it does in dream-life. The sleeper may be seized with a presentiment of death, which threatens to place him in the grave. But the dream-work knows how to select a condition that will turn even that dreaded event into a wish-fulfilment: the dreamer sees himself in an ancient Etruscan grave which he has climbed down into, happy to find his archaeological interests satisfied. 1 In the same way, a man makes the forces of nature not simply into persons with whom he can associate as he would with his equals—that would not do justice to the overpowering impression which those forces make on
him—but he gives them the character of a father. He turns them into gods, following in this, as I have tried to show,2 not only an infantile prototype but a phylogenetic one.

In the course of time the first observations were made of regularity and conformity to law in natural phenomena, and with this the forces of nature lost their human traits. But man's

____________________________________________________________________

1 [This was an actual dream of Freud's, reported in Chapter VI (G) of The Interpretation of Dreams (1900a), Standard Ed., 5, 454-5.]

2 [See Section 6 of the fourth essay in Totem and Taboo (1912-13), Standard Ed., 13, 146 ff.]

- 17 -

helplessness remains and along with it his longing for his father, and the gods. The gods retain their threefold task: they must exorcize the terrors of nature, they must reconcile men to the cruelty of Fate, particularly as it is shown in death, and they must compensate them for the sufferings and privations which a civilized life in common has imposed on them.

But within these functions there is a gradual displacement of accent. It was observed that the phenomena of nature developed automatically according to internal necessities. Without doubt the gods were the lords of nature; they had arranged it to be as it was and now they could leave it to itself. Only occasionally, in what are known as miracles, did they intervene in its course, as though to make it plain that they had relinquished nothing of their original sphere of power. As regards the apportioning of destinies, an unpleasant suspicion persisted that the perplexity and helplessness of the human race could not be remedied. It was here that the gods were most apt to fail. If they themselves created Fate, then their counsels must be deemed inscrutable. The notion dawned on the most gifted people of antiquity that Moira [Fate] stood above the gods and that the gods themselves had their own destinies. And the more autonomous nature became and the more the gods withdrew from it, the more earnestly were all expectations directed to the third function of the gods—the more did morality become their true domain. It now became the task of the gods to even out the defects and evils of civilization, to attend to the sufferings which men inflict on one another in their life together and to watch over the fulfilment of the precepts of civilization, which men obey so imperfectly. Those precepts themselves were credited with a divine origin; they were elevated beyond human society and were extended to nature and the universe.

And thus a store of ideas is created, born from man's need to make his helplessness tolerable and built up from the material of memories of the helplessness of his own childhood and the childhood of the human race. It can clearly be seen that the possession of these ideas protects him in two directions—against the dangers of nature and Fate, and against the injuries that threaten him from human society itself. Here is the gist of the matter. Life in this world serves a higher purpose; no doubt it is not easy to guess what that purpose is, but it certainly signifies a perfecting of man's nature. It is probably the spiritual part of
man, the soul, which in the course of time has so slowly and unwillingly detached itself from the body, that is the object of this elevation and exaltation. Everything that happens in this world is an expression of the intentions of an intelligence superior to us, which in the end, though its ways and byways are difficult to follow, orders everything for the best—that is, to make it enjoyable for us. Over each one of us there watches a benevolent Providence which is only seemingly stern and which will not suffer us to become a plaything of the over-mighty and pitiless forces of nature. Death itself is not extinction, is not a return to inorganic lifelessness, but the beginning of a new kind of existence which lies on the path of development to something higher. And, looking in the other direction, this view announces that the same moral laws which our civilizations have set up govern the whole universe as well, except that they are maintained by a supreme court of justice with incomparably more power and consistency. In the end all good is rewarded and all evil punished, if not actually in this form of life then in the later existences that begin after death. In this way all the terrors, the sufferings and the hardships of life are destined to be obliterated. Life after death, which continues life on earth just as the invisible part of the spectrum joins on to the visible part, brings us all the perfection that we may perhaps have missed here. And the superior wisdom which directs this course of things, the infinite goodness that expresses itself in it, the justice that achieves its aim in it—these are the attributes of the divine beings who also created us and the world as a whole, or rather, of the one divine being into which, in our civilization, all the gods of antiquity have been condensed. The people which first succeeded in thus concentrating the divine attributes was not a little proud of the advance. It had laid open to view the father who had all along been hidden behind every divine figure as its nucleus. Fundamentally this was a return to the historical beginnings of the idea of God. Now that God was a single person, man's relations to him could recover the intimacy and intensity of the child's relation to his father. But if one had done so much for one's father, one wanted to have a reward, or at least to be his only beloved child, his Chosen People. Very much later, pious America laid claim to being ‘God's own Country’; and, as regards one of the shapes in which men worship the deity, the claim is undoubtedly valid.

The religious ideas that have been summarized above have of course passed through a long process of development and have been adhered to in various phases by various civilizations. I have singled out one such phase, which roughly corresponds to the final form taken by our present-day white Christian civilization. It is easy to see that not all the parts of this picture tally equally well with one another, that not all the questions that press for an answer receive one, and that it is difficult to dismiss the contradiction of daily experience. Nevertheless, such as they are, those ideas—ideas which are religious in the widest sense—are prized as the most precious possession of civilization, as the most precious thing it has to offer its participants. It is far more highly prized than all the devices for winning treasures from the earth or providing men with sustenance or preventing their illnesses, and so forth. People feel that life would not be tolerable if they did not attach to these ideas the value that is claimed for them. And now the question arises: what are these ideas in the light of psychology? Whence do they derive the esteem in which they are held? And, to take a further timid step, what is their real worth?
IV

An enquiry which proceeds like a monologue, without interruption, is not altogether free from danger. One is too easily tempted into pushing aside thoughts which threaten to break into it, and in exchange one is left with a feeling of uncertainty which in the end one tries to keep down by over-decisiveness. I shall therefore imagine that I have an opponent who follows my arguments with mistrust, and here and there I shall allow him to interject some remarks.1

I hear him say: ‘You have repeatedly used the expressions “civilization creates these religious ideas”, “civilization places them at the disposal of its participants”. There is something about this that sounds strange to me. I cannot myself say why, but it does not sound so natural as it does to say that civilization has made rules about distributing the products of labour or about rights concerning women and children.’

I think, all the same, that I am justified in expressing myself in this way. I have tried to show that religious ideas have arisen from the same need as have all the other achievements of civilization: from the necessity of defending oneself against the crushingly superior force of nature. To this a second motive was added—the urge to rectify the shortcomings of civilization which made themselves painfully felt. Moreover, it is especially apposite to say that civilization gives the individual these ideas, for he finds them there already; they are presented to him ready-made, and he would not be able to discover them for himself. What he is entering into is the heritage of many generations, and he takes it over as he does the multiplication table, geometry, and similar things. There is indeed a difference in this, but that difference lies elsewhere and I cannot examine it yet. The feeling of strangeness that you mention may be partly due to the fact that this body of religious ideas is usually put forward as a divine revelation. But this presentation of it is itself a part of the religious system, and it entirely ignores the

1 [Freud had adopted the same method of presentation in his recent discussion of lay analysis (1926e) and also, though in somewhat different circumstances, a quarter of a century earlier in his paper on ‘Screen Memories’ (1899a).]

- 21 -

known historical development of these ideas and their differences in different epochs and civilizations.

‘Here is another point, which seems to me to be more important. You argue that the humanization of nature is derived from the need to put an end to man's perplexity and helplessness in the face of its dreaded forces, to get into a relation with them and finally to influence them. But a motive of this kind seems superfluous. Primitive man has no choice, he has no other way of thinking. It is natural to him, something innate, as it were, to project his existence outwards into the world and to regard every event which he observes as the
manifestation of beings who at bottom are like himself. It is his only method of comprehension. And it is by no means self-evident, on the contrary it is a remarkable coincidence, if by thus indulging his natural disposition he succeeds in satisfying one of his greatest needs.’

I do not find that so striking. Do you suppose that human thought has no practical motives, that it is simply the expression of a disinterested curiosity? That is surely very improbable. I believe rather that when man personifies the forces of nature he is again following an infantile model. He has learnt from the persons in his earliest environment that the way to influence them is to establish a relation with them; and so, later on, with the same end in view, he treats everything else that he comes across in the same way as he treated those persons. Thus I do not contradict your descriptive observation; it is in fact natural to man to personify everything that he wants to understand in order later to control it (psychical mastering as a preparation for physical mastering); but I provide in addition a motive and a genesis for this peculiarity of human thinking.

‘And now here is yet a third point. You have dealt with the origin of religion once before, in your book Totem and Taboo [1912-13]. But there it appeared in a different light. Everything was the son–father relationship. God was the exalted father, and the longing for the father was the root of the need for religion. Since then, it seems, you have discovered the factor of human weakness and helplessness, to which indeed the chief role in the formation of religion is generally assigned, and now you transpose everything that was once the father complex into terms of helplessness. May I ask you to explain this transformation?’

With pleasure. I was only waiting for this invitation. But is it really a transformation? In Totem and Taboo it was not my purpose to explain the origin of religions but only of totemism. Can you, from any of the views known to you, explain the fact that the first shape in which the protecting deity revealed itself to men should have been that of an animal, that there was a prohibition against killing and eating this animal and that nevertheless the solemn custom was to kill and eat it communally once a year? This is precisely what happens in totemism. And it is hardly to the purpose to argue about whether totemism ought to be called a religion. It has intimate connections with the later god-religions. The totem animals become the sacred animals of the gods; and the earliest, but most fundamental moral restrictions—the prohibitions against murder and incest —originate in totemism. Whether or not you accept the conclusions of Totem and Taboo, I hope you will admit that a number of very remarkable, disconnected facts are brought together in it into a consistent whole.

The question of why in the long run the animal god did not suffice, and was replaced by a human one, was hardly touched on in Totem and Taboo, and other problems concerning the formation of religion were not mentioned in the book at all. Do you regard a limitation of that kind as the same thing as a denial? My work is a good example of the strict isolation of the particular contribution which psycho-analytic discussion can make to the solution of the problem of religion. If I am now trying to add the other, less deeply concealed part, you should not accuse me of contradicting myself, just as before you accused me of being one-sided. It is, of course, my
duty to point out the connecting links between what I said earlier and what I put forward now, between the deeper and the manifest motives, between the father-complex and man's helplessness and need for protection.

These connections are not hard to find. They consist in the relation of the child's helplessness to the helplessness of the adult which continues it. So that, as was to be expected, the motives for the formation of religion which psycho-analysis revealed now turn out to be the same as the infantile contribution to the manifest motives. Let us transport ourselves into the mental life of a child. You remember the choice of object according to the anaclitic [attachment] type, which psycho-analysis talks of?

1 [See Freud's paper on narcissism (1914c), Standard Ed., 14, 87.]

- 23 -

The libido there follows the paths of narcissistic needs and attaches itself to the objects which ensure the satisfaction of those needs. In this way the mother, who satisfies the child's hunger, becomes its first love-object and certainly also its first protection against all the undefined dangers which threaten it in the external world—its first protection against anxiety, we may say.

In this function [of protection] the mother is soon replaced by the stronger father, who retains that position for the rest of childhood. But the child's attitude to its father is coloured by a peculiar ambivalence. The father himself constitutes a danger for the child, perhaps because of its earlier relation to its mother. Thus it fears him no less than it longs for him and admires him. The indications of this ambivalence in the attitude to the father are deeply imprinted in every religion, as was shown in Totem and Taboo. When the growing individual finds that he is destined to remain a child for ever, that he can never do without protection against strange superior powers, he lends those powers the features belonging to the figure of his father; he creates for himself the gods whom he dreads, whom he seeks to propitiate, and whom he nevertheless entrusts with his own protection. Thus his longing for a father is a motive identical with his need for protection against the consequences of his human weakness. The defence against childish helplessness is what lends its characteristic features to the adult's reaction to the helplessness which he has to acknowledge—a reaction which is precisely the formation of religion. But it is not my intention to enquire any further into the development of the idea of God; what we are concerned with here is the finished body of religious ideas as it is transmitted by civilization to the individual.

V

Let us now take up the thread of our enquiry. What, then, is the psychological significance of religious ideas and under what heading are we to classify them? The question is not at all easy to answer immediately. After rejecting a number of formulations, we will take our stand on the
Religious ideas are teachings and assertions about facts and conditions of external (or internal) reality which tell one something one has not discovered for oneself and which lay claim to one's belief. Since they give us information about what is most important and interesting to us in life, they are particularly highly prized. Anyone who knows nothing of them is very ignorant; and anyone who has added them to his knowledge may consider himself much the richer.

There are, of course, many such teachings about the most various things in the world. Every school lesson is full of them. Let us take geography. We are told that the town of Constance lies on the Bodensee. A student song adds: ‘if you don't believe it, go and see.’ I happen to have been there and can confirm the fact that that lovely town lies on the shore of a wide stretch of water which all those who live round it call the Bodensee; and I am now completely convinced of the correctness of this geographical assertion. In this connection I am reminded of another, very remarkable, experience. I was already a man of mature years when I stood for the first time on the hill of the Acropolis in Athens, between the temple ruins, looking out over the blue sea. A feeling of astonishment mingled with my joy. It seemed to say: ‘So it really is true, just as we learnt at school!’ How shallow and weak must have been the belief I then acquired in the real truth of what I heard, if I could be so astonished now! But I will not lay too much stress on the significance of this experience; for my astonishment could have had another explanation, which did not occur to me at the time and which is of a wholly subjective nature and has to do with the special character of the place.

All teachings like these, then, demand belief in their contents, but not without producing grounds for their claim. They are put forward as the epitomized result of a longer process of thought based on observation and certainly also on inferences. If anyone wants to go through this process himself instead of accepting its result, they show him how to set about it. Moreover, we are always in addition given the source of the knowledge conveyed by them, where that source is not self-evident, as it is in the case of geographical assertions. For instance, the earth is shaped like a sphere; the proofs adduced for this are Foucault's pendulum experiment, the behaviour of the horizon and the possibility of circumnavigating the earth. Since it is impracticable, as everyone concerned realizes, to send every schoolchild on a voyage round the world, we are satisfied with letting what is taught at school be taken on trust; but we know that the path to acquiring a personal conviction remains open.
Let us try to apply the same test to the teachings of religion. When we ask on what their claim to be believed is founded, we are met with three answers, which harmonize remarkably badly with one another. Firstly, these teachings deserve to be believed because they were already believed by our primal ancestors; secondly, we possess proofs which have been handed down to us from those same primaeval times; and thirdly, it is forbidden to raise the question of their authentication at all. In former days anything so presumptuous was visited with the severest penalties, and even to-day society looks askance at any attempt to raise the question again.

This third point is bound to rouse our strongest suspicions. After all, a prohibition like this can only be for one reason— that society is very well aware of the insecurity of the claim it makes on behalf of its religious doctrines. Otherwise it would certainly be very ready to put the necessary data at the disposal of anyone who wanted to arrive at conviction. This being so, it is with a feeling of mistrust which it is hard to allay that we pass on to an examination of the other two grounds of proof. We ought to believe because our forefathers believed. But these

1 [J. B. L. Foucault (1819-68) demonstrated the diurnal motion of the earth by means of a pendulum in 1851.]

ancestors of ours were far more ignorant than we are. They believed in things we could not possibly accept to-day; and the possibility occurs to us that the doctrines of religion may belong to that class too. The proofs they have left us are set down in writings which themselves bear every mark of untrustworthiness. They are full of contradictions, revisions and falsifications, and where they speak of factual confirmations they are themselves unconfirmed. It does not help much to have it asserted that their wording, or even their content only, originates from divine revelation; for this assertion is itself one of the doctrines whose authenticity is under examination, and no proposition can be a proof of itself.

Thus we arrive at the singular conclusion that of all the information provided by our cultural assets it is precisely the elements which might be of the greatest importance to us and which have the task of solving the riddles of the universe and of reconciling us to the sufferings of life—it is precisely those elements that are the least well authenticated of any. We should not be able to bring ourselves to accept anything of so little concern to us as the fact that whales bear young instead of laying eggs, if it were not capable of better proof than this.

This state of affairs is in itself a very remarkable psychological problem. And let no one suppose that what I have said about the impossibility of proving the truth of religious doctrines contains anything new. It has been felt at all times— undoubtedly, too, by the ancestors who bequeathed us this legacy. Many of them probably nourished the same doubts as ours, but the pressure imposed on them was too strong for them to have dared to utter them. And since then countless people have been tormented by similar doubts, and have striven to suppress them, because they thought it was their duty to believe; many brilliant intellects have broken down over this conflict,
and many characters have been impaired by the compromises with which they have tried to find a way out of it.

If all the evidence put forward for the authenticity of religious teachings originates in the past, it is natural to look round and see whether the present, about which it is easier to form judgements, may not also be able to furnish evidence of the sort. If by this means we could succeed in clearing even a single portion of the religious system from doubt, the whole of it would gain enormously in credibility. The proceedings of the spiritualists

meet us at this point; they are convinced of the survival of the individual soul and they seek to demonstrate to us beyond doubt the truth of this one religious doctrine. Unfortunately they cannot succeed in refuting the fact that the appearance and utterances of their spirits are merely the products of their own mental activity. They have called up the spirits of the greatest men and of the most eminent thinkers, but all the pronouncements and information which they have received from them have been so foolish and so wretchedly meaningless that one can find nothing credible in them but the capacity of the spirits to adapt themselves to the circle of people who have conjured them up.

I must now mention two attempts that have been made— both of which convey the impression of being desperate efforts—to evade the problem. One, of a violent nature, is ancient; the other is subtle and modern. The first is the ‘Credo quia absurdum of the early Father of the Church. It maintains that religious doctrines are outside the jurisdiction of reason— are above reason. Their truth must be felt inwardly, and they need not be comprehended. But this Credo is only of interest as a self-confession. As an authoritative statement it has no binding force. Am I to be obliged to believe every absurdity? And if not, why this one in particular? There is no appeal to a court above that of reason. If the truth of religious doctrines is dependent on an inner experience which bears witness to that truth, what is one to do about the many people who do not have this rare experience? One may require every man to use the gift of reason which he possesses, but one cannot erect, on the basis of a motive that exists only for a very few, an obligation that shall apply to everyone. If one man has gained an unshakable conviction of the true reality of religious doctrines from a state of ecstasy which has deeply moved him, of what significance is that to others?

The second attempt is the one made by the philosophy of ‘As if. This asserts that our thought-activity includes a great number of hypotheses whose groundlessness and even absurdity we fully realize. They are called ‘fictions’, but for a variety of practical reasons we have to behave ‘as if’ we believed in these fictions. This is the case with religious doctrines because of their incomparable importance for the maintenance of human
