Introduction

Arthritis is a condition that can cause a plethora of symptoms, including deterioration of muscles and joints, a reduction of use in your main joints, and of course, severe pain.

Some cases of arthritis, like rheumatoid, can affect the immune system as well. There are constant and active studies on the conditions and your doctor knows the best treatment options for your specific situation.

Fortunately, on top of the modern medical treatment of arthritis, there are a few different things you can do daily to reduce and relieve the symptoms. Some studies have even shown that some of these all-natural treatments can even diminish symptoms of different types of arthritis!

In the following report, we will discuss 10 of the most widely used, all-natural forms of treatment for your arthritis symptoms.

Click Here To Learn More

Most of the following treatments can even be done in the comfort

of your own home, and can be combined with current medical

treatments you may be receiving.

Hopefully, with implementation you can begin to live a healthier

and more pain-free life with arthritis.

Let's begin!

Important Note: It's important that you seek the advice and

approval from your health care provider prior to making any

drastic changes to your diet, exercise, or supplement intake.

Arthritis Pain Remedies: Special Report

Tip #1: Regular Exercise

Exercise is vital to keeping those joints and muscles elongated, warmed up, and moving. Make sure to always discuss your weight and exercise routine with your physician before following any workout plan.

Keep in mind that exercise doesn't have to mean 7 days at the gym pumping iron and running on treadmills. Regular movement, whether it's walking around your home or participating in aerobic classes at your gym, does wonders for arthritic pain.

In the past, it was thought that exercise made arthritis pain worse, but this has been shown to, not only be untrue, but quite the opposite. Daily workouts help to build and maintain a strong and healthy cardiovascular and muscular system.

Beyond the strengthening and stretching you get from exercise, maintaining a healthy weight contributes in many other ways as

well, such as reducing the strain on muscles and joints. If you are overweight, it is important that you set goals with your physician to reach your optimal healthy weight and that you set yourself up for long-term success, rather than short-term results.

Laura Robbins, Senior Vice President of Education and Academic Affairs at the Hospital for Special Surgery in New York, says that for every pound you lose, you reduce the pressure on your knees by four pounds.

In fact, Roy Altman, MD, Professor of Medicine at the University of California, has seen symptoms of arthritis completely disappear from patients that have lost ten to twenty pounds of excess weight.

Along with the symptoms of arthritis, you will be improving your overall mental and physical well-being, helping to control other ailments your body may face as you age. A strong heart and a strong mind can do wonders for pain management!

Tip #2: Hot & Cold

Treatments

One of the main natural treatments for arthritis include hot and cold treatments. There are several different types of arthritis so make sure to ask your doctor which will be better for your specific symptoms.

Cold Therapy helps to reduce joint swelling and inflammation.

This type of treatment is most often recommended to rheumatoid arthritis sufferers, but can help others as well.

You can alternate hot and cold treatments as needed but always monitor how your skin reacts and adjust or discontinue as needed.

Cold treatments should be limited to 20-minute sessions. Here are several cold treatments used:

- Use a cloth covered bag of ice applied to the painful area.
- Submerge the joint in an ice bath.

NOTE: Check with a physician before submerging, especially if it is a large area of the body.

 Simple cold packs kept in fridge or freezer, applied when needed.

Heat therapy is often good for all other types of arthritis, as well as, in conjunction with cold treatments. The heat relaxes your muscles and helps blood flow to the affected area.

Heat treatments should be monitored and adjusted depending upon your body's reaction.

Here are several heat treatments widely used by arthritis sufferers:

Click Here To Learn More

- Start your day with a hot bath or shower to get your blood flowing and joints relaxed.
- A warm paraffin wax to affected joints. (This can often be done by a professional to monitor wax temperature.)
- Apply a heating pad, heat pack, or other warm heat source to the affected joints.

Always make sure, when using heat therapy, to maintain a comfortable level of heat.

Hot tubs are also excellent ways to cover larger areas of the body, but always check with your physician first as they can be dangerous for those with certain health conditions.

Tip #3: Acupuncture

Acupuncture has been around for centuries and is an ancient Chinese Medicine. This process involves a medical professional trained in the art, inserting thin needles into specific pressure points on your body.

The focus of acupuncture is to reroute the energy stored behind your pain, and balance it throughout the body. It may sound gimmicky, but acupuncture is actually one of the most researched alternative therapies in the world, and is even recommended by the World Health Organization for a multitude of ailments.

Acupuncture is also one of the oldest pain remedies in history, and is completely natural. These tiny needles are stimulating the energy laid out in pathways across your body, called meridians. Studies have shown that acupuncture lowers the levels of inflammation inducing chemicals in the body.

Keep in mind that acupuncture cannot be safely administered by anyone except for a trained and certified acupuncturist.

The needles not only need to be placed in very specific spots connected to your specific ailments, but there is a rigorous hygienic process as well. Make sure to speak to your doctor, and get a referral if necessary, to find the right practitioner for you.

And don't worry, it may sound painful, but the needles are barely inserted into the skin, keeping the process relaxing and rejuvenating.

Tip #4: Omega-3 Fatty Acids

Omega-3 Fatty Acids have made the headlines in natural health for some time now, and for good reason. They are essential to a healthy and strong body. Omega-3 are good fats, ones you find mostly in plants and marine life. There are two main types of Omega-3's that are most commonly found in oily fish.

EPA (Eicosapentaenoic Acid)- EPA is the most well-known of the Omega-3's. It is a name arthritis sufferers want to remember. EPA not only helps to breakdown and synthesize those chemicals responsible for blood-clotting but it also helps dramatically with inflammation.

But where does EPA come from?

The simple answer to this is fish. Fish oil contains an abundance of EPA. The fish get this important Omega-3 from the algae that they eat. EPA fish oil is available in a variety of ways, but is easiest

consumed through capsules sold at your local grocer or health food store.

DHA (Docosahexaenoic Acid)- DHA is another important Omega-3. DHA is a natural fatty acid abundant in the human body. It makes up the key parts of the retina in the eye, and part of the brain, the cerebral cortex.

The Cerebral Cortex, or grey matter, is responsible for intelligence, personality, motor function, organization, touch, sensory information processing, and language. These things are vital to your everyday existence and can play a huge part in pain management.

You can find Omega-3's in a variety of food, not just fish oil. These foods include nuts, cold-water fish like salmon and tuna, seeds, and other supplements.

In a 2015 study on the role of Omega-3's on inflammatory diseases, it is found that they can reduce symptoms of Rheumatoid and other arthritis symptoms.

Regardless of their pain management abilities, Omega-3 fatty acids should be a regular addition to your healthy and active lifestyle. Check with your physician to see which form of Omega-3's best fit your lifestyle.

Tip #5: Turmeric

Turmeric is nicknamed the *Golden Spice* and not just for its rich golden color. Turmeric studies are ongoing, but its health benefits seem to be growing by the day. This spice is found in many different curries and is harvested in India and Indonesia.

It's nothing new. Turmeric has been part of traditional medicine for centuries!

At the base of the healing properties of turmeric, it has been found to block the protein that causes inflammation. Because of these blocking abilities, turmeric has been found to ease the pain of inflammation just as well as some nonsteroidal anti-inflammatory drugs, or NASAIDs.

And it's all natural, which makes it even better.

The chemical in turmeric that does all the heavy lifting is called curcumin, and is the secret to its anti-inflammatory abilities.

While inflammation does play an important role in our bodies, blocking pathogens that could easily kill us, long term chronic inflammation like that observed in arthritis sufferers can be debilitating.

Inflammation is a complex process, but the curcumin in turmeric is an inflammation fighting bioactive substance that attacks the chronic inflammation on a molecular level.

On top of helping with your arthritic pain, curcumin has been shown to fight inflammation that also plays a major role in heart disease, cancer, Alzheimer's and many other conditions.

Turmeric can be taken in many ways from pills to the actual root. Why not add it to your favorite dish? On its own, turmeric has a very mild taste and can compliment almost any meal.
