# INTRODUCTION

This is the season for a lot of things, and getting in shape is no exception. With the hustle and bustle of every new day's demand, there couldn't be a more perfect time to create a workout plan and kick it into high gear!

There are many things that cause us to wake up and realize the body we're living in isn't the healthiest of bodies. Stress, especially this time of year, can lead to overeating and increased cortisol- both of which are not conducive to getting or staying fit. Being overwhelmed with balancing all aspects of life- work, kids, home, school, etc., can also cause us to under eat or fly through a drive-thru without thinking twice.

There are a plethora of factors that can throw our healthy habits off track or just completely off the radar.

When we shed just even a small amount of weight, we reap a ton of health benefits. Our chances of developing diseases such as diabetes and heart disease drops. We are less likely to suffer from sleep apnea. Our blood pressure drops and we feel better about ourselves. Energy increases as we become more active and we produce more feel-good hormones when we exercise.

***No matter how you slice it, medical or physical, the benefits of working out and losing weight are plentiful.***

So with that said, it's time to begin the journey that will ultimately change your life...are you ready?

Let's get started!

# CHAPTER 1 –5 STEPS TO ENSURE A SOLID FOUNDATION FOR SUCCESSFUL WEIGHT LOSS.

Once you decide to start taking steps towards a healthier lifestyle, it's important to follow some certain criteria in order to ensure success. From experience, the following things are what I think are imperative to any successful weight loss plan

## **Set Reasonable Goals-**

If you have 50 pounds to lose, don't plan on losing it all in two months. Losing 1-2 pounds a week is reasonable and maintainable, but not much more than that. So if you want to lose those 50 pounds, plan on doing so over a course of 6-7 months instead. This will not only be much easier for you to maintain if you drop at a steady rate, but it will also be a much healthier approach.

## **Practice Patience-**

Remember that it took some time for you to get to where you are today. So don't expect to see progress happen magically, and don't get discouraged when things are taking longer than you hoped or anticipated. The most maintainable results are those that are achieved in a healthy fashion and not in a crash-diet style.

## **Acknowledge Mistakes and Move Forward-**

In the perfect world, we'd never fall off track or make mistakes, but that's just not reality. There will be times where you will experience setbacks- you'll sneak in a slice of cake, skip a workout, find yourself at a McDonald's drive thru. The only time mistakes will make a dent in your progress is if you let one turn into ten. Acknowledge it happened, understand the trigger, forgive yourself and move on.

## **Share your Goals-**

We tend to feel most accountable when others around us know what we're working towards. For example, if you tell your coworkers about a weight loss goal, you'll be less likely or at least think twice before having dessert at a company luncheon. You may even be able to find support groups in your community where other individuals with common goals meet.

## **Celebrate Small Accomplishments-**

Let's go back to the example of wanting to lose 50 pounds. Perhaps part of your weight loss plan is to start working out, something you've never really stuck to doing. Set a goal of working out three days a week for a month straight. Once you accomplish that, reward yourself with something non-food related, like a trip to the spa or a new gym outfit. It's the small steps that get us to the finish line, so celebrate them!

**\*\*\* PLEASE NOTE\*\*\***

## **Seek Medical Clearance First-**

People tend to think they only need to be cleared by a doctor before exercising if they have a known medical condition or old injury, but that's not necessarily the case.

Oftentimes the majority of exercise-induced injuries are a result of an unknown heart condition of some sort in combination with vigorous exercise. It's not a bad idea any way to see your doctor for an annual checkup or physical for general well-being purposes.

# CHAPTER 2 – BUSTING 5 COMMON WEIGHT LOSS MYTHS

There are many myths about fat loss out there that could derail you before you even begin. Recognizing what they can do goes a long way toward helping you reach your own fat loss goals. Here are 5 myths about losing fat you need to ignore.

## **1. Diets Don't Work**

Sure they do!

Practically all diets work, at least in the short term. And diets should only be for the short term.

You can take off the excess weight pretty quickly with an [effective diet](#).

But you KEEP the weight off with a LIFESTYLE change!

People go on a diet, lose weight, and go back to what they were doing before, which is how they added all that extra fat in the first place.

Then they blame the diet for not working. It's not the diet, it's the lifestyle!

## **2. Going Extremely Low-Calorie is bad**

Going very low calorie, and even outright fasting, can be an extremely effective way to lose weight quickly, as you get a bigger calorie deficit and force the body to burn fat for energy.

But it has to be done the right way. You can't go extremely low-calorie for a long stretch at a time; maybe just a few days here and there to kick start the metabolism.

### **3. I Just Want To Tone Up**

I've always hated this one. There is no such thing as getting toned. You can build muscle and you can burn fat. That's it.

What most people call toning up is burning away fat while preserving lean muscle. You don't want to lose muscle along with the fat or you'll just be a smaller version of your fat self, or what we call skinny fat.

### **4. Light-Weight High-Rep Training Is the Best Way to Burn Fat**

It can be effective, if done correctly. But if you don't work hard, you won't see results.

The BEST training style for fat-loss is a mix of heavier training, to preserve mass and strength, and lighter, high-rep training that focuses on Lactic Acid accumulation.

When Lactic Acid accumulates in the body, this changes the acidity (the pH) in the bloodstream. Your body reacts to this by secreting Growth Hormone, which is a potent fat-burning and muscle-preserving hormone.

### **5. You Can Never Eat Your Favorite Foods Again**

Just not true. Of course you can. Can you eat whatever you want, whenever you want? No, but that doesn't mean you can never have ice cream, or pizza, or potato chips again.

Keep these five fat loss myths in mind when beginning your weight loss journey and you can get better results from your training and [nutrition programs](#).

Now we've busted those common myths, it's time for figuring out a game plan of just exactly how you're going to start living a healthier life.

# CHAPTER 3 – NUTRITION TIPS TO BURN MORE CALORIES STARTING TODAY!

When trying to lose fat and build some muscle so you can reshape your body, it helps to find simple tricks to eliminate or burn more calories, whether it's through your workout program, or through your nutrition plan.

Here are five simple nutrition tips that will help put your body in fat burning mode. This will help you get even more out of your workout plan, helping you make even faster progress.

## **1. Eat More Vegetables.**

Simple sure, but how many people really does it? Try mixing and matching fresh vegetables for variety. Besides the numerous health benefits, most veggies are full of fiber, which will fill you up, as well as burn more calories than eating other foods.

Yes, frozen vegetables are just fine. In fact, frozen fruits and vegetables have shown to be more likely to hold their nutrient value versus fresh because of things like the time they sit after being picked before you have them at home and eat them.

## **2. Go Ahead and Snack**

Just snack on good stuff, like raisins, nuts (especially almonds), veggies and most fruit. Not dried fruit, though. Have you ever looked at the calorie count and ingredients of most mixed nut and fruit "trail mix" products? It's not pretty!

## **3. Speaking Of Nuts, Add Nuts To Your Yogurt And Salads.**

Chopped nuts make a great alternative to "breaded" style garnishes like croutons.

#### **4. Specific Food Combinations Can Help To Burn Calories By Ramping Up Your Metabolism.**

Eat carbs that are rich in fiber. They take longer to digest and you will feel “fuller” for longer periods of time.

Along with carbs rich in fiber, take in more protein. Your body burns more calories when you eat protein than it burns digesting either fats or carbohydrates.

Eating more protein to burn fat was confirmed in a study published in the American Journal of Physiology.

One group was fed a high protein diet (just over one gram per pound of bodyweight per day) while the second group consumed a protein diet near equal to that of the RDA.

The group eating the high protein diet burned fat more than the group consuming protein near equal to the RDA.

Want to burn fat or build muscle? Get lots of fiber and protein.

Eating protein also helps to prevent muscle loss while dieting, which can help prevent the slowing of your metabolism.

#### **5. Yogurt Can Help You Lose Weight While Protecting Muscle.**

A study of overweight people who ate three servings of yogurt daily for 12 weeks lost 22% more weight, 61% more body fat and 81% more abdominal fat than people who ate a similar number of calories but no dairy products.

Make sure to get yogurt with real fruit and no added sugar. Or, get plain yogurt and add your own berries to it.

Yogurt is also an easy and convenient snack and contains high quality protein as well.

Put these five tips into practice and your new muscle building, [fat burning machine](#) (your body) will reward you for it.

## Basic Food Group Guidelines

### Protein

• Ham	• Turkey
• Veal	• Eggs
• Venison	• Buffalo Shrimp
• Lean Beef/Steak	• Swordfish
• Pork	• Salmon
• Lamb	• Tuna
• Chicken	• Cottage Cheese

These are real meats, not sandwich meats filled with unhealthy additives like nitrates. And forget the glaze for the ham!

## Carbohydrates/Vegetables/Fruits

• Parsley	• Cabbage
• Cucumber	• Spinach
• Peppers	• Asparagus
• Olives	• Peppers: green, yellow, red
• Romaine Lettuce	• Barley
• Onion	• Tomatoes
• Cucumber	• Oatmeal
• Yam	• Collard Greens
• Sweet Potato	• Carrots
• Apple	• Beans
• Orange	• All type Brown Rice
• Squash	• Brussel Sprouts
• Corn	• Zuchini
• Cauliflower	• Lentils
• Green Beans	• Black eye Peas
• Garlic	• Legumes

<ul style="list-style-type: none"> <li>• Artichokes</li> </ul>	<ul style="list-style-type: none"> <li>• Pineapple</li> </ul>
<ul style="list-style-type: none"> <li>• Yogurt</li> </ul>	<ul style="list-style-type: none"> <li>• Beets</li> </ul>
<ul style="list-style-type: none"> <li>• Avocado</li> </ul>	<ul style="list-style-type: none"> <li>• Peas</li> </ul>

## Good Fats

<ul style="list-style-type: none"> <li>• Udo's Choice Oil Blend</li> </ul>	<ul style="list-style-type: none"> <li>• Coconut Oil</li> </ul>
<ul style="list-style-type: none"> <li>• Flaxseed Oil</li> </ul>	<ul style="list-style-type: none"> <li>• Fatty Fish such as salmon, herring and trout</li> </ul>
<ul style="list-style-type: none"> <li>• Fish Oil Capsules</li> </ul>	<ul style="list-style-type: none"> <li>• Natural Peanut Butter</li> </ul>
<ul style="list-style-type: none"> <li>• Olive Oil</li> </ul>	<ul style="list-style-type: none"> <li>• Nuts and Seeds like Almonds Macadamia Oil</li> </ul>

This is a partial list. As far as fruits, get fresh fruits, or frozen fruits without added sugar. For canned fruit, it should be in water or its own natural juice.

As far as vegetables go raw, canned or frozen with no added salt, lightly cooked or raw.

Click link for detailed information on [Paleo Recipes](#)

Ok!

Fact is your selections will vary based on total caloric needs, total protein needs, etc. Not to mention your taste buds. If you don't eat meat, that's okay. You can get adequate protein from vegetable sources, especially a variety of beans and legumes, such as pinto beans, black bean, lima beans, etc

Stay away from all processed foods. I can't stress this enough. Processed foods play a huge role in obesity as well as many other health problems such as diabetes.

Consider staying away from all white carbohydrates, as well. At the very least minimize them by only allowing yourselves these treats once in a while such as on a reward day.

White carbohydrates include bread, rice, potatoes, cereal, pasta, fried food with breading, tortillas and anything else white that falls under this category.

## CHAPTER 4 – A DAY OF HEALTHY EATING

Sometimes we get stuck for ideas and just don't know what to eat. We may have all the choices but actually seeing a [healthy eating plan](#) is a different thing altogether.

In the following set menu for the day you will see a structured eating plan without being restrictive. Always remember to get in at least 10 glasses of water throughout the day. Feel free to use as is and then supplement one choice for something else. The key is consistency and persistence.

### **Meal 1**

1/2 cup Natural Oatmeal (can add cinnamon and a few berries [strawberry, blueberry, raspberry, blackberry, watermelon])

Omelet

3 Egg Whites to every Whole Egg  
Chopped Onion  
Chopped Pepper  
Black Beans

Green Tea

### **Meal 2**

Raw Almonds or Cashews

### **Meal 3**

Chicken Breast (Garlic & Pepper Seasoning & chopped onions)  
Mixed Vegetables  
Pinto Beans

## **Meal 4**

Salmon or Tuna (chopped in salad if you prefer)  
Large Chopped Salad (onion, peppers, broccoli, tomato, cucumber, macadamia oil and vinegar)

## **Meal 5**

Raw Almonds or Cashews  
Green Tea

Now we have seen a healthy eating plan in action, it's time to start getting active and adding an exercise program into the mix to supercharge your weight loss and increase your health. Let's get active!

# CHAPTER 5 –START EXERCISING TO INCINERATE BODY FAT

It's important to decide what type of workout you want to engage in- lifting weights, dancing, swimming, biking, etc.

It's important that whatever you choose, you choose something that you *enjoy* doing, to increase your chances of sticking to it. If, for example, you choose weight lifting, you could start off with a workout that looks something like this:

- 3 days a week, lift weights
- Each time, do a full-body workout
- Begin with stretches and some cardio to warm up
- Do 3 sets of 8-12 reps of one exercise per each body part (i.e. shoulders, hamstrings, biceps, abs, etc.)
- Stretch as part of a cool down routine
