1.0 Introduction

The theories and subject matter touched in this paper is extensive but far from complete. It is an accumulation of many thought experiments resulting in many theories over the course of almost two decades compiled together into a single document with few derived calculations. As a whole, this paper is only an initial attempt at formulating these theories in a clear and logical manner. For this reason alone, this paper is considered general, a work in progress and why the title is post-fixed with the versioning letter "A".

This collective theory is meant to compliment Newton's, Einstein's, Plank's and Bohr's theories with a fresh new perspective. These theories as a whole are in homage to all the great masters who have been a huge influence in my development since very early childhood, my college and university professors, but especially my high school physics teacher Mr. Mohammed who lit a burning flame of curiosity in physics and who always made time to entertain my questions and concepts with a humble and pleasant disposition.

It is with great hope that this collective theory, its theorized applications and there from its derivatives will aide Humankind in achieving balance with itself, the Universe and Existence.
